If you were developing this site, what would you change?

8 vastausta

In it's current state the website is informative and clear, but quite bland. More pictures / videos and more interesting design choices would make it more appealing.

colours and element size

The reason why we wouldn't necessarily use this website, is not because of how the website is made, but rather we personally don't feel a need for this kind of website. However the interface is very clean and doesn't contain anything unnecessary. It seems like a good site for those who need it.

Cant tell by the demo because its not finished but there always should be button to return main page, otherwise very clear and simple ui design!

I would maybe make the menu bar to stand out a bit more

Dont know really

The navigation/header bar could be more prominently present.

Google Forms
